

**Your Partner in Success.**

# **Global Energy Solutions:**

**Processing oil and  
gas based products into readily useable energy  
sources.**

**Electrical power generation.**

**Everything you need to design, plan,  
fund and build your project,  
anywhere.**

# Power Generation

**Natural Gas for large macro systems**

**Hydro Dams for large macro systems**

**Solar Array for intermediate and micro systems**

**Bio for waste removal and micro systems**

**Hybrid technology systems**

# Flexible Designed Systems

Use of multiple technologies to accomplish the end results desired by the client.

Considering existing infrastructure for use via surveys.

Developing a plan that considers future growth and use.

Phased installations focusing on critical needs.

# Oil and Gas Refineries

**Design and engineering for client requirements.**

**Water or land installations.**

**Multiple product input and output requirements.**

**Design, construction and operation.**

**Mobile, modular and permanent systems of any size.**

# System Conversions and Upgrades

Conversion of coal units to newer technologies, including removal of toxic elements.

Upgrade systems in a modular fashion keeping aspects in place.

Transmission upgrades and retrofits.

Local power strategies.

# Funding Options

**Flexible funding solutions on a project  
by project basis**

**Combination public-private partnership  
packages and Build Own Transfer**

**Equity and Debt financing**

**Your Partner in Success.**
